

Practical Machine Learning

Day 1: SEP23 DBDA

Kiran Waghmare

CDAC Mumbai

1. Exploratory Data Analysis
2. Handling Missing value
3. Categorical Encoding
4. Standardization & Normalization
5. Handling Outliers

- Correlation
- Forward Elimination
- Backward Elimination
- Univariate Selection
- RandomForest
- Importance
- Feature Selection with Decision Trees

Build End-End Projects

Flask, Docker, Kubernetes, Rest-API

CrossValidation Techniques
GridSearch, RandomizedSearch, Hyperopt, Optuna

Hyper Parameter Tuning

Ensemble Learning
Adaboost, Xgboost, Lgb

Machine Learning Algorithms
Supervised, Unsupervised

Feature Selection

Feature Engineering

Basic Statistics & Algebra

Programming Language
Python, R

pandas +

Matplotlib

NumPy

SciPy

python

Agenda

- What is machine learning?
- Algorithm types of Machine learning
- Supervised and Unsupervised Learning
- Uses of Machine learning
- Evaluating ML techniques
- Introduction to Scikit Learn

Traditional Programming

Machine Learning

Why Machine Learning?

- Develop systems that can automatically adapt and customize themselves to individual users.
 - Personalized news or mail filter
- Discover new knowledge from large databases (**data mining**).
 - Market basket analysis (e.g. diapers and beer)
- Ability to mimic human and replace certain monotonous tasks - which require some intelligence.
 - like recognizing handwritten characters
- Develop systems that are too difficult/expensive to construct manually because they require specific detailed skills or knowledge tuned to a specific task (knowledge engineering bottleneck).

Machine Learning

- **Herbert Alexander Simon:**
“Learning is any process by which a system improves performance from experience.”
- “Machine Learning is concerned with computer programs that automatically improve their performance through experience. “

Herbert Simon

[Turing Award](#) 1975

[Nobel Prize in Economics](#) 1978

The concept of learning in a ML system

- Learning = Improving with experience at some task
 - Improve over task T ,
 - With respect to performance measure, P
 - Based on experience, E .

Definition

A computer program is said to learn from **experience E** with respect to some class of **tasks T** and performance **measure P** , if its performance at tasks T , as measured by P , **improves** with experience E .

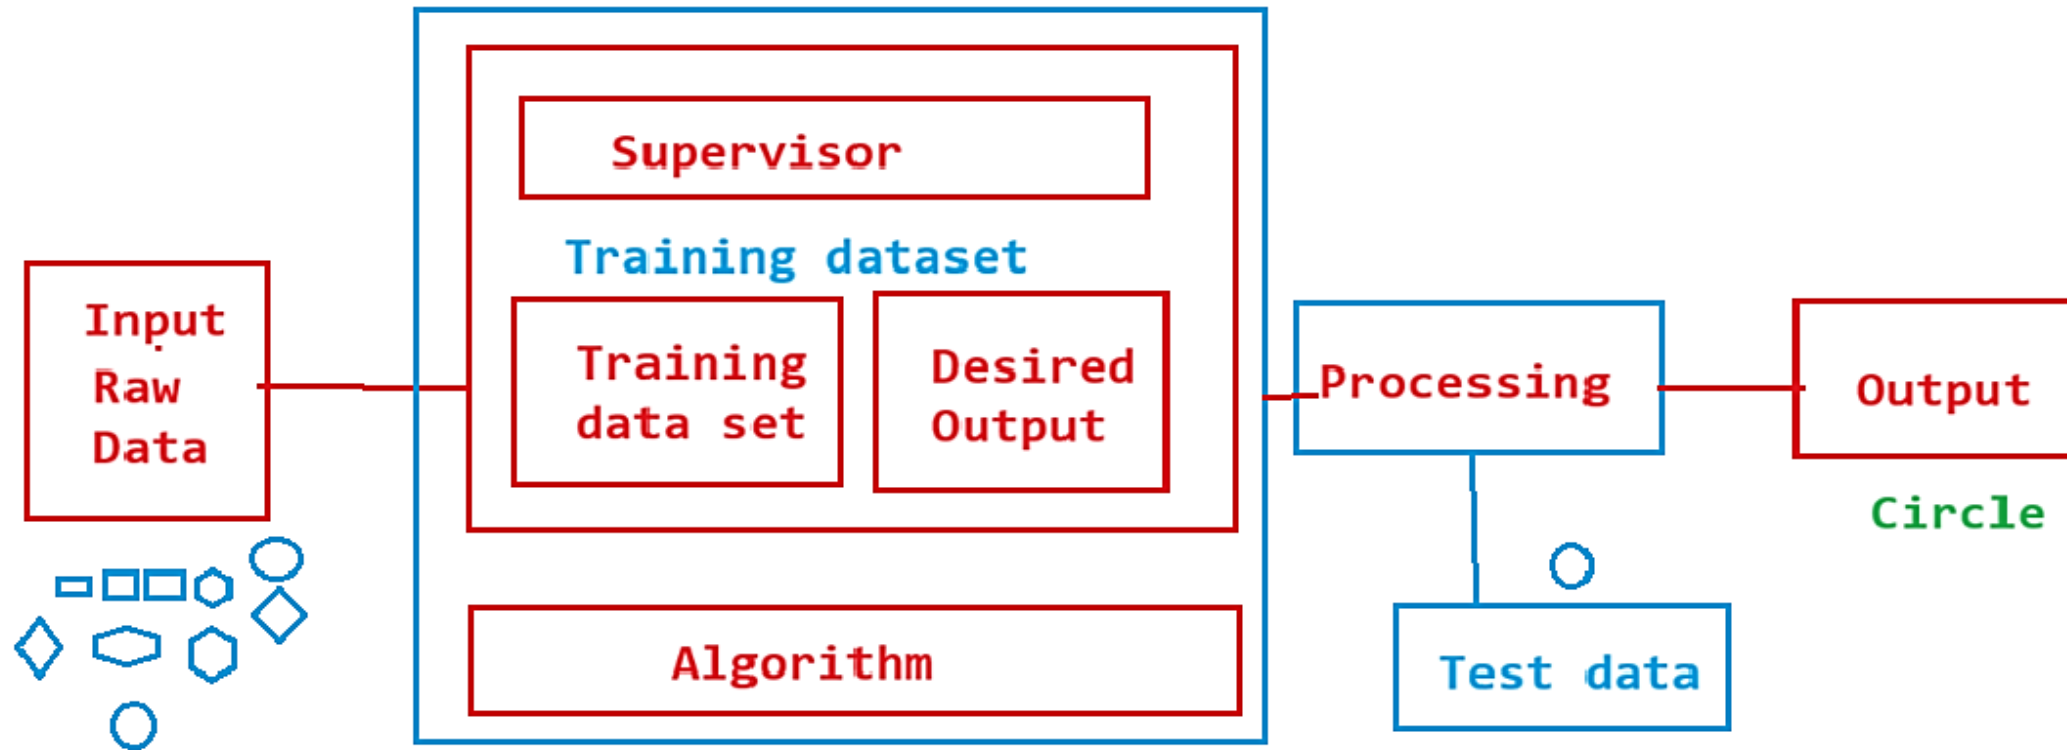

What is Machine Learning?

- [Arthur Samuel, 1959]
 - Field of study that gives computers
 - the ability to learn without being explicitly programmed
- [Kevin Murphy] algorithms that
 - automatically detect patterns in data
 - use the uncovered patterns to predict future data or other outcomes of interest
- [Tom Mitchell] algorithms that
 - improve their performance (P)
 - at some task (T)
 - with experience (E)

Working of Machine Learning:

Supervised Learning

Types of Machine Learning

- Machine Learning Algorithms can be classified into 3 types as follows –
 - **Supervised Learning**
 - **Unsupervised Learning**
 - **Reinforcement Learning**
